

Simple Pit Type Stackers

Independent Systems

The Hercules Simple Pit Type Stackers are available in double or triple stackers. These are two post parking lifts, and work by platforms moving upwards from the pit or downwards to the pit, this means every vehicle can be parked or retrieved conveniently without moving having to move the other cars.

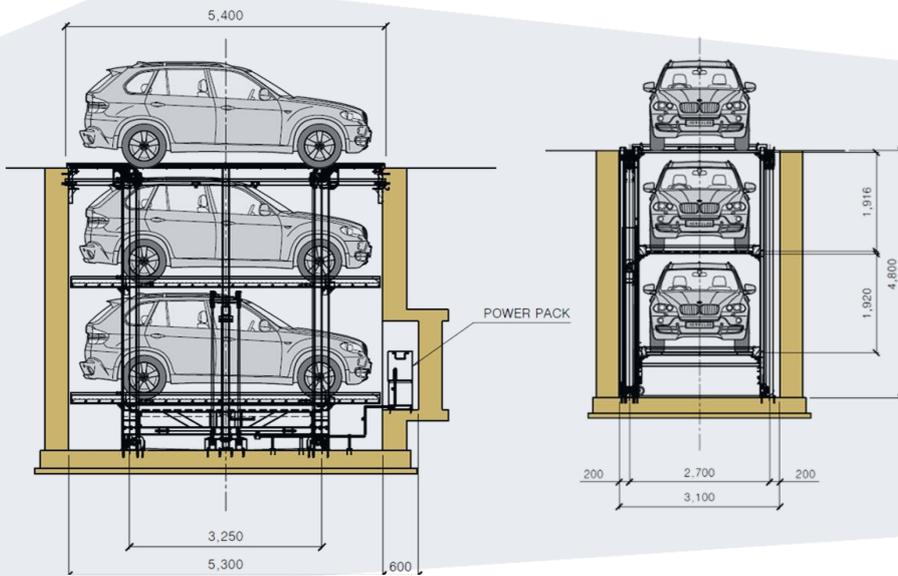

Suitable for both commercial and residential parking purposes. There are many dimensions possible for different project requirements—so contact us with your requirements and we'll make sure it fits. The structure should be placed in a pit with certain dimensions and reinforced by fixing posts to walls.

DOUBLE STACKER

There are many dimensions possible for different project requirements—so contact us with your requirements and we'll make sure it fits.

Illustrations are an example only, each of our Hercules carparking solutions are tailor designed to your parking needs.

TRIPLE STACKER

There are many dimensions possible for different project requirements—so contact us with your requirements and we'll make sure it fits.

Illustrations are an example only, each of our Hercules carparking solutions are tailor designed to your parking needs.

CUSTOM SIZES

We can manufacture our machines to suit most sites and to work around any obstacles. Want something a little bit longer, wider or taller? We should be able to adjust parking platform sizes for you. We don't give you a standard machine size for you to fit into your building but work the other way around. Tell us how much space you have, and we will design a solution specific to your project.
