

Two Post Double Stackers

HERCULES DEPENDENT SYSTEMS

The Hercules 2 Post Double Stacker is an Above Ground Stacker which allows two cars to be parked in one car space above ground. These systems can be installed inside or outside and can be installed quickly and, if required, dismantled and moved to a new location.

The top platform can be stopped at different heights to accommodate for various vehicles & ceiling heights. 2 Post Double stackers can be banked together side by side or in tandem (one behind the other) or even multiple units one behind the other, to increase the number of cars in a given space.

It is the simplest form of car stacker, which requires the car on the ground level to be removed in order to park or retrieve the upper car.
