## *Hercules Dependent Systems*

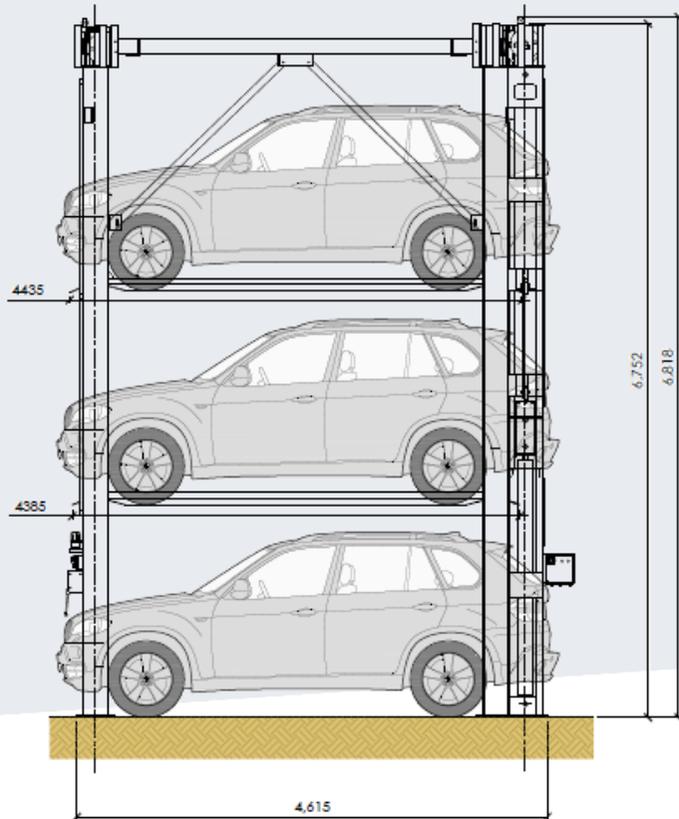

*Illustrations in this brochure are an example only, each of our Hercules carparking solutions are tailor designed to your parking needs*

The Hercules Above Ground Stackers. These systems can be installed inside or outside and can be installed quickly and, if required, dismantled and moved to a new location.

It is the simplest form of car stacker, which requires the car on the ground level to be removed in order to park or retrieve the upper car.

# Need to park more cars?

*Illustrations in this brochure are an example only, each of our Hercules carparking solutions are tailor designed to your parking needs*

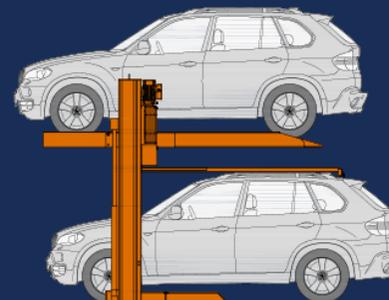

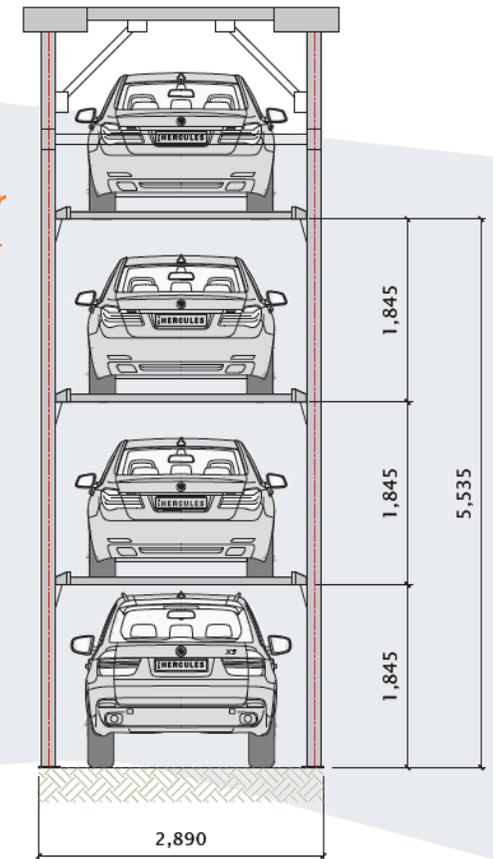

Our Hercules Above Ground Triple or Quad Stacker is the most effective way to triple or quadruple the capacity of a typical parking area.

It moves only vertically making the machine a dependent machine, meaning the users must clear the cars on lower levels to get a higher-level car down.

The four-post stacker parking lift can be installed indoors or outdoors. The parking system shares legs to allow for better space utilization and stronger structural design.

**Above Ground Triple Stacker**  
*Allows parking of 3 cars in one space.*

**Above Ground Quad Stacker**  
*Allows parking of 4 cars in one space.*
